

ZHAOHAN GAO

The Hague, Netherlands

☎ +31-657109322 ✉ gaozhaohan22@gmail.com [in LinkedIn Profile](#) [Github Profile](#)

Education

VU Amsterdam & University of Amsterdam

Master of Science in Computer Science

09/2024 – 08/2026

Amsterdam, Netherlands

Northeast Normal University

Bachelor of Engineering in Software Engineering

09/2019 – 06/2023

Changchun, China

Experience

Versuni

Data Engineer Intern

10/2025 – Present

Amsterdam, Netherlands

- Architected ETL pipelines on Databricks leveraging Python and PySpark, efficiently batch-processing large-scale data with volumes reaching 159M+ rows in the data lakehouse.
- Engineered web scrapers and API connectors to efficiently ingest data from disparate sources into the data warehouse.
- Partnered with 3 cross-functional departments across Europe, Turkey, and APAC to develop Power BI dashboards, effectively visualizing core KPIs spanning e-commerce performance, supply chain operations, and retail media.
- Spearheaded the migration of legacy data assets—transitioning local web scraping scripts and raw files from SharePoint into the Databricks environment—to establish a scalable and centralized data architecture.

Pluxbox

Software Engineer Intern

05/2025 – 10/2025

Hilversum, Netherlands

- Architected an end-to-end Continuous Delivery (CD) platform to automate the lifecycle management of K8S services, slashing deployment time by 60% and empowering non-engineering teams to execute self-service releases.
- Implemented comprehensive system observability using SigNoz, building custom dashboards and configuring automated alerts for cluster logs and metrics to monitor the system.
- Provisioned cloud-based Kubernetes (K8S) clusters using Helm and re-architected the legacy MongoDB infrastructure into a highly available sharded cluster, ensuring robust fault tolerance.
- Engineered core features for enterprise no-code software products utilizing a modern tech stack encompassing Nest.js, GraphQL, and Vue.js.

NIO

Data Engineer Intern

12/2024 – 05/2025

Amsterdam, Netherlands

- Optimized data warehouse performance by refactoring PySpark scripts and rescheduling ETL pipelines, successfully reducing API call overhead by 70%.
- Engineered robust ETL pipelines using PySpark and SQL to ingest and transform high-volume data from distributed Kafka clusters and REST APIs, centralizing data across multiple platforms.
- Collaborated with international, cross-functional teams to translate data requirements into interactive BI dashboards, visualizing core e-commerce metrics and actionable user insights.

Jack Technology

Software Engineer

07/2023 – 07/2024

Zhejiang, China

- Engineered robust ETL pipelines using Pentaho and SQL to extract and transform complex supply chain data into the centralized data warehouse.
- Delivered actionable operational insights by designing interactive BI dashboards in FineReport to visualize end-to-end supply chain metrics.
- Spearheaded backend architecture refactoring and middleware upgrades, leveraging Redis caching to optimize API performance and successfully reduce response times by 40%.
- Developed full-stack enterprise applications (WMS, CRM, SCADA, SRM) using Java (Spring Boot) and Vue.js, and streamlined deployments by building CI/CD pipelines with Jenkins and Docker.

Skills

Languages & Databases: Python, SQL, Java, JavaScript, MongoDB, Redis, Presto SQL

Big Data & BI: Databricks, PySpark, Apache Spark, Hadoop, Hive, Power BI, Pentaho

Cloud, DevOps: AWS, Azure, Docker, Kubernetes (K8s), Jenkins, Helm
